## CONTRACT MANAGEMENT

Farmlogics ' easy yet efficient contract management module handles the registration of farmers, contracts and ensures all the details like project parameters, input delivery, Schedules, Price and payment parameters. It ensures necessary info is available for you at the precise moment to ensure the revenue realization.

## FARMER SUPPORT & FARM OPERATIONS

You understand the farmers are the core of your business and you take extra effort to make sure that necessary technological, financial and supports are available whenever they are required. Additional input or service deliveries, direct payments or cash advance by farmers etc. are some of the possibilities that are factored in to the operational capabilities and settlement process takes care of all these additional details while preparing the final settlement for farmers.

Farmlogics allows you coordinate your farmers and your technical/field staff. It allows to record the field scouting data by the technical staff. Field staff can record their farm visits, observations, action taken, crop conditions including pest management, harvesting etc. on their hand held devices which can be received at your main office and necessary actions can be taken immediately. The possibilities include crop life cycle, pest management service, weather forecast and farm operational advice services to farmers, yield projection and harvesting plan and logistics planning.

## HARVEST RECEIPTS AND INVOICE SETTLEMENTS

Produce from farmers are received in company warehouse or collection centers. With the pricing data set to the contracts, inputs and other loan parameters FarmLogics consider all necessary deductions, loans and advances and final settlement is processed and generates well documented Invoice for farmers. It also ensures the traceability of produce supplied by farmers' right from product receipt, warehousing, processing and packaging for various market standard compliances.
